

Building Greater Access

Your help or your referral could be that "tipping point" difference that turns a breakthrough in evaluating the brain skills of children into a movement for greater learning capacity. Together we can change the future foundation of education in America and the lives of millions of children.

We want to provide sponsorship and put every child in America in front of a computer for 30 minutes to measure the underlying strengths and weaknesses that determine their capacity to learn and achieve their full potential.

You can help build greater awareness and access to cognitive skill evaluation. Start by asking yourself these questions:

Who do I know who has a child struggling to learn or achieve at grade level?

Who do I know in parent's organizations, schools or after-school programs?

Who do I know who is an administrator in education?

Who do I know in government or public policy?

Who do I know who is involved in educational reform?

Who do I know in business or in corporate America who is not only concerned about the future ability of their company to find the best employees, but also wants smarter employees?

Who can I contact to tell them about this breakthrough—beginning with a simple and affordable online screening tool?
