

The cognitive skill profile scores below are for 64 students selected from the bottom quartile of academic performance in a school that is not meeting Adequate Yearly Progress (AYP) and is in danger of being closed. All 64 were tested during three lab periods in one day and their profile information and full reports were immediately available in the school's group database.

The school's selection criteria for these students to participate was based solely on their individual standardized academic scores. The results obtained from the online cognitive skill screening are highly correlated to the observed and demonstrated academic abilities of each student.

Access to online brain training exercises is being made available for each student. Students will work for one lab period per day for four days per week over 12 weeks. Additional access is available for each student to continue advancement in their core learning skills as needed or desired for one year.

The online program selected has been proven in the nation's leading clinics to greatly increase cognitive skills and prepare students to use their enhanced learning and processing abilities to increase not only their academic potential but their academic performance as well. By focusing on the fundamental learning needs of these students the school is addressing AYP and their future by changing lives.
